SKILLS

OTHERS

MySQL, PostgreSQL, GitHub
and GitHub Actions, Jenkins,
CircleCI, AWS, Datadog.

LANGUAGES

- Spanish (Native)
- English (Fluent)
- Italian (Intermediate)
- German (Beginner)

CERTIFICATIONS

AWS Certified Cloud Practitioner

EDUCATION

National University of Luján.

Licentiate degree.

Computer and Information Sciences (85% complete)

Full Stack Software engineer with 15+ years of experience in business applications. Passionate about new challenges and eager to keep learning.

LATEST EXPERIENCE

Software Engineer

Taller | Dec 2021 - Present

- Developed and maintained scalable microservices for the Venmo Groups feature using Python (FastAPI, Django) and AWS (CDK, Lambda, DynamoDB, S3, IAM, SQS, DLQs);
- TypeScript and JavaScript were used when using GraphQL with Apollo for integrating different microservices with client-side applications (Web, iOS, and Android);
- Led CI/CD efforts with GitHub Actions and contributed to the automation of deployment processes. I have used DataDog for monitoring, Optimizely/Redis for feature flagging, and Amplitude/Insightly integrations for data analysis;

Software Engineer

Uniciti | Aug 2024 - Nov 2024

- Developed front-end and back-end features using React Native and Ruby on Rails;
- Implemented feature flags using Flipper for controlled rollout of new functionality;
- Created and integrated tests with RSpec and SimpleCov to enhance coverage in the CI/CD pipeline;
- Utilized Redis for caching geocoding references, improving performance;
- Built and deployed "Likes" and "Comments" functionality for user interaction;
- Designed and implemented a categories system to enable tagging of user posts;
- Integrated AI via Raix to automatically suggest relevant categories for posts;
- Implemented WebSockets for real-time updates, delivering a responsive user experience;

Software Engineer

DevBorn S.A. | May 2018 - Feb 2023

- New member subscription plan created over legacy code;
- reFills system with for the users to subscribe to products instead of a plan;
- Ratings and Reviews system for the box and items that come inside of it;
- Sponsored products program for users to add these type of items to their cart;
- Loyalty system for allowing users to redeem products based on points;
- Standardize React projects and automated npm library updates;
- Migrated whole projects to use TypeScript;
- Trained Junior and Mid level developers;
- Automated processes with GitHub Actions (GHA);
