- Core Java Programming
- SQL

## Achivements

- Received Scholarship, Committee Member in B. Tech./ B. E.

## Test Ranks

- JEE MAINS : 309456

## Education

- **Bachelor of Technology** 2025  
Dattajirao Kadam Technology Education Society, Kolhapur  
Score: 8.05 / 10 CGPA
- **Class XII** 2021  
State Board of Maharastra  
Score: 83 %
- **Class X** 2019  
State Board of Maharastra  
Score: 85.6 %

## Internship

### • ClariTech Solutions, Pune | Aug 2024 - Aug 2025

- I built a clean, responsive front end for an e-commerce site using Angular, HTML5, CSS3, Bootstrap, JavaScript, and TypeScript. The platform focused on Ayurvedic remedies and cancer care.
- I used Angular's component-based structure and routing for smooth navigation across pages like product listings and consultation forms. With Bootstrap and CSS Grid, the design was made mobile-friendly.
- I also implemented lazy loading and modular code to enhance performance and usability, especially for a sensitive healthcare audience.

## Projects

### • Medical E-commerce Platform | Dec 2024 - Jun 2025

I built a responsive medical e-commerce web app using Angular, aiming to make the user experience smooth and intuitive. The project was structured using modular, reusable components so everything stayed clean, organized, and easy to maintain.

Users can browse products by category. I really focused on making these interactions feel fast and easy, just like a real online shopping experience should. I also created smooth navigation using Angular's routing, allowing users to move between pages without any friction

To make sure everything looked good on all devices, I used Bootstrap and responsive CSS. Angular services and pipes helped manage data and display it efficiently throughout the app.

### • AgriSync: Smart Farming Solutions | Dec 2024 - Jun 2025

AgriSync is a smart farming platform that helps farmers detect crop diseases early, check real-time market prices, and sell directly to consumers for better profits. Built with Flask and Node.js, it runs smoothly even in low-network areas and offers a simple dashboard to manage crops, finances, and insights - bringing modern tech to traditional farming.

### • Wisdom Web Application | Feb 2024 - May 2024

Wisdom is a web app that helps improve education by collecting student feedback. It has student, faculty, and admin modules- students share feedback, faculty reviews it through tables and graphs, and admins manage it all. It's a simple way for schools and colleges to understand student needs and improve learning experiences.

### • Bike Showroom Management System | Jan 2024 - Feb 2024

The Bike Showroom Management System is a user-friendly app developed using Java and MySQL to manage daily tasks like handling employee/customer details, bike inventory, billing, and secure logins. It offers a clean interface and smooth data flow, giving me practical experience in building reliable, real-world business applications.
