About Me

I am a computer engineering graduate and a software developer with a background in algorithm design. I bring together technical expertise and creative problem-solving skills to build innovative solutions and tackle complex challenges.

Projects and Works

Forensics VR, (Graduation Project) (TÜBİTAK Genetik Eğitimi için Yapay Zeka Destekli Sanal Gerçeklik Uygulamasının Geliştirilmesi Projesi (3230721) [Easy Clap Games, Nanobiz, UTRLAB])
- Forensics VR is a simulation. This project aims to develop an educational application designed to enable students to understand complex biological concepts more effectively by using virtual reality technology to support genetics education.

Intern Software Developer - Esen System Integration Company,
- Developed an algorithm to calculate the median of data to be transferred to an aircraft.
- Focused on data recording, gaining experience in data analysis and optimization.

Easy Clap Games – Intern Game Developer (Hyper-Casual Game Development)
- Learned and gained hands-on experience in hyper-casual game development.
- Developed game mechanics using Unity and C#.
- Worked on game design, level design, and user experience improvements.
- Collaborated with a team using agile methodologies and contributed to the game development process.

Education

Computer Engineering | University of Turkish Aeronautical Association *(2019-2024)* 🌐

High School | TED Afyon Koleji *(2015-2019)*

Skills

- SQL
- ColdFusion
- C#
- Unity
- JavaScript
- HTML, CSS
