BOOTSTRAP,

AJAX,

JQUERY

PROJECTS

SNOPII ADMIN PANEL

Worked as a backend developer with a rest api.
AES 256 and AES 128 encrypted.

This application builds on Spring Boot with Hibernate and REST APIs. It is an admin panel for a **gaming application**. I worked as a backend developer there, and the frontend was built with Angular. We used a Swing implementation for API documentation. We also used **a JWT token-based login system.**

We have a role system on the URL base and use interceptors for each request. Depending on the contest type, users join a contest using a pic or video post. And all contests are paid. There are many payment gateways like PayPal, Stripe, etc.

This is an end-to-end encrypted site where you can't see the data traveling in the network or request.

GO4WALLET ADMIN PANEL

Worked as a full-stack developer. Also worked on encryption and decryption with third-party APIs

This application builds on Spring Boot with Hibernate, and most of the time, we work on third-party APIs for **recharge**. There, we decompile the Android app and convert it into a web app. There we can recharge multiple lapu(User) at a time.

ONLINE HRMS

Worked as a full-stack developer.

This application is built on Spring Boot with JPA and contains a front end and a back end. It is used to monitor banks' investments in terms of SLR/non-SLR.

FIXED ASSET MANAGEMENT SPRING MVC

Worked as a full-stack developer.

This application is built on Spring MVC with a JDBC Template. It monitors assets purchased by banks and makes transactions between clients and vendors. The application contains the front end (checker, maker, admin panel) and the back end.

INVESTMENT MODULE SPRING MVC

Worked as a full-stack developer.

This application is built on Spring MVC with JDBC Template. This application is used for monitoring the investment of banks in terms of

OPERATING SYSTEMS

MYSQL WORKBENCH,

STS

SLR/non-SLR.This application contains a frontend (checker, maker, admin panel) and a backend.

XGEN MAIL MODULE JSP AND SERVLETS

Working as a full-stack developer.

This application is built on JSP and Java servlet with JDBC Template. This application is used for mailing purposes. This application contains a frontend (checker, maker, admin panel) and a backend.

GODIL MODULE MAVEN WEB

Working as a full-stack developer.

This application is built on JSP and Java servlet with JDBC Template. This application is used to purchase and mail domains. This application contains a frontend (checker, maker, admin panel) and a backend.

QP PACKING MODULE MAVEN WEB

Working as a full-stack developer.

This application is built on Java servlets and threads with JDBC Template. This application is used for paper, center, label, Excel, and large PDF files management purposes. This application contains a backend in Java and is just an API-based application.
